Announcing  
Anti Bio Thailand.

We're bringing  
innovative technology  
to the world.

We've opened  
a hub in South  
East Asia with  
the blessing of  
the local Thai  
community.

**Our team are ready to discuss how you can clean water, and control termites with this great home tech.**

In line with our global mantra, Anti Bio Technologies proudly announce the opening of its South-East-Asia hub in Nong Khai, Thailand.

This office is prepared and fully staffed with trained consultants to solve problems of water cleanliness and termites, with many new products in the pipeline.

It also provides employment for many Thai locals.

Founder and CEO David Telfer says 'solving clean water and termite problems just got easier and much healthier for millions in this region. It was an obvious choice of location for this emerging technology'

**The 2018 tech is here:  
New models with added  
capabilities including  
multiple lines, increased  
range and soon, an app  
which visually shows  
the tech in action.**

# CELLAR CONTROL: WE'VE DOUBLED THE LINES PER UNIT.

Publicans and bar owners can now clean twice the amount of beerlines, with just one sleeker streamlined unit, saving money and time..

We have reengineered our 2018 units in line with industry feedback, with a sleek new model to suit any environment. Less units to install is not just a great saving but also an easier way to service multiple lines.

We've also had some amazing success stories with existing units, some installed 10 years ago still going strong!

Our partners and distributors are responsible all tech-savvy companies embracing this new technology, producing safer, healthier (and better tasting) outcomes for their customers, Cheers.

## WE'RE DESIGNING AN APP THAT 'SPEAKS' TO YOU.

The Anti Bio Termite Control app is in development.

We can tell you that it will be able to detect signals from your termite control unit and give you an idea of the sound-wave Hz it is emitting. You'll be able to 'communicate' with this amazing technology as it tells you the distance the soundwaves are emitting, the Hz cycles, and whether the unit is properly activated. You'll receive software updates.

Let's take a step back, termites are blind and communicate primarily by sound. Especially when threatened, it is their signal to evacuate, for good.

Anti Bio have developed and researched a successful software program which emits soundwaves designed to 'evict' entire termite colonies by sending false 'enemy' threat signals.

These algorithms are not only patented but are sealed in a locked safe.

You can buy now or pay monthly to have access to this tech. Contact [info@antibio.com.au](mailto:info@antibio.com.au) and ask for David.

# Anti Bio Termite Control has been relaunched in France, here's why.

Termites Surveys are mandatory for any property sale in France. Southern regions are the most affected by termites.

A report on the presence, or otherwise, of termites and other similar destructive pests in the property. The survey is called the état des risques parasitaires.

It is only required within designated areas of the country. The local mairie will be able to advise you whether the property is located in one of these areas.

If a survey is required, then it cannot be dated earlier than six months from the sale contract.

**RÉSULTATS ÉPROUVÉS POUR L'ÉLIMINATION PERMANENTE DES TERMITES SANS PRODUITS CHIMIQUES.**

- économies de coûts
- durabilité
- efficacité
- faible entretien

**AntiBio**  
CONTRÔLE LES TERMITES

Here are the three reports re-quired to sell property in France:  
1. Asbestos 2. Lead 3. Termites

## This proven tech will help conquer France's most unwelcome visitor.

Control termites in French homes with Anti Bio Technology.

Anti Bio Technologies has been proven effective, cost-saving and durable not only in France but in 20 other countries around the world. Our products have survived typhoon storms, drought, floods and power shortages. The south of France has a potent mix of elements all of which attract **termites**. Here are a few: wooden homes, old homes, warmer climate, more humid conditions,

**Anti Bio chemical-free technology to the rescue.**

# Update on Flamboyant Resort Saint Martin, battered by Hurricane Irma in 2017.

## The rebuilding begins.

You'll remember Flamboyant Resort from our very first newsletter. Above is the 'before' photo and sadly below is the 'after'.

With government aid plus community collaboration and willingness to help each other, the expectations of restoring the Island to its former glory will be sooner than previously anticipated. Great news indeed!

Anti Bio Technologies expect to play an integral part of the new infrastructure with rigid systems designed to combat water borne contamination threats, termite infestations and cleaner water for these beautiful Islands.

New HOMESAFE system designed to work on a multitude of applications in the home whether it be pool, water or termite related, which is cheaper and more cost effective.

Updates will comply with new components available, and avoid supply issues from components which have become outdated.

Improvements have also been made to the external box to improve quality, durability and weathering.

Get homesafe for one outright cost, or subscribe to AntiBio Technologies for just \$99 per month.

WHAT'S IN THE PIPELINE?
